

The Past Revisited

In the Winter 2000 edition of this newsletter, the first issue of *The Lacy Ledger*, there was a short introduction that read:

"If this publication looks unfamiliar, it's because you're holding the first issue. From now on, you'll be able to greet each season with the arrival of *The Lacy Ledger*."

"*The Lacy Ledger* has three objectives: 1) to provide you with a bit of useful information that can help you manage your life and your business more effectively; 2) to tell you a little about Lacy Construction Company, our projects and our people; and 3) to entertain you. We believe that one of the best ways to cope with the stresses of life and work is to laugh a little, and some of what you'll read here is designed to accomplish that."

"We hope you enjoy this and future issues, and we encourage your feedback. As in running our own business, we're always striving to improve, and by having you tell us what you like and don't like about *The Lacy Ledger*, we can work to make it better."

We bring this to your attention because we still believe this to be true, and as we begin another chapter with this issue of *The Lacy Ledger*, we wanted to revisit some items from past newsletters. This issue brings with it a fresh new look, and incorporates our newly adopted logo. For now, we hope you will enjoy taking a step back in time with us.

The Lacy Ledger - Autumn 2000

Saint Francis Medical Center Oncology Project

How much does 1,500 yards of concrete weigh? Answer: Approximately 5.9 million pounds. That's the amount of concrete being used for the Saint Francis Oncology Accelerator project.

The project entailed a 3,000-square-foot, two-story addition to the Saint Francis Cancer Treatment Center, located in Grand Island, Nebraska. Lacy Construction

St. Francis Linear Accelerator interior complete.

has worked with Saint Francis Medical Center on many projects, and is extremely proud of the relationship it has built with the hospital.

"Partnering together with Lacy Construction to plan and complete a project that meets the needs of the hospital has proven very beneficial for Saint Francis," says Dale Hartwig, vice president for ancillary services. "Incorporating Lacy's expertise to avoid expense during the planning and development phase, while accelerating the project schedule at the same time, is a win/win situation for all of us," he adds.

The Lacy Ledger - Summer 2004

Quick, Give Us A Big Building!

CNH Paint Addition

There's only one good reason to start a project during a cold Nebraska winter—a shortage of time! When CNH came to Lacy Construction Company in December with an urgent need to have their roof installed by May 7th, we knew that it meant a winter start. Sitework and utility relocation for the new 18,900-square-foot Paint Addition started in mid January. Despite the weather—seven out of the first 10 days boasted below zero temperatures—construction progressed nicely. Throw in a couple of snowstorms and you have some pretty challenging working conditions.

In spite of the weather, with the cooperation of our subcontractors the project stayed on schedule and met every milestone set for the job.

Today at Lacy Construction

As we celebrate our 60th anniversary this year, we find it very hard to bring to you a comprehensive look at our past. With more than 700 projects under our belt and the multitude of workers it took to build them, it would take much more than the pages we have here to revisit them all.

We hope you have enjoyed this brief glimpse of our past. We will go forward from here with a new logo and newsletter appearance, but will continue to provide you the absolute best in construction services and client relations. And, of course, we will continue to bring you the latest information on current projects, our people, and a little humor with *The Lacy Ledger*...Thank you!

—*The Lacy Team*

The Lacy Ledger - Spring 2001 **UNK Is Growing**

Lacy Construction Company undertook the expansion and renovation project at the Student Union Building on the University of Nebraska at Kearney campus. The three-phase project includes an addition of approximately 28,000 square feet and renovation of the existing building.

The project originally came in above the projected budget, but Lacy Construction, working in conjunction with architect The Clark Enersen Partners and the owner, value engineered the project to bring it within the university's pre-established budget.

This job is a perfect example of how working together as a team can create a win-win situation for everyone involved.

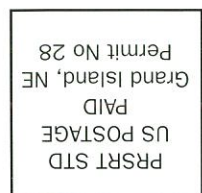

The architect's rendering originally published.
